28 DECISION ON APPEAL
29

30 STATEMENT OF CASE

31 Appellants appeal under 35 U.S.C. § 134 (2002) from a final rejection
32 of claims 1-5 and 16-33. We have jurisdiction under 35 U.S.C. § 6(b)
33 (2002). The case came before us for hearing on September 13, 2007.

34 Appellants invented a hollow glass product which includes a collar
35 that extends beyond the cross section of the main body of the product
36 (Specification 1; claim 1; Figure 2).

1 Claim 1 under appeal reads as follows:

1. (Previously Presented) A glass product comprising:
a main container body having a closed bottom;
a secondary container body; and
a collar opened to an exterior of the product interposed between and
communicating with said main container body and the secondary
container body, said collar having an axis not parallel to an axis of
said main container body and an axis of said secondary container
body, the collar being integral with the main and secondary container
bodies, and the collar
extending beyond a cross section of the main body.

3 The Examiner rejected claims 1-5 and 16-33 under 35 U.S.C.

14 § 103(a) (2004).

15 The prior art relied upon by the Examiner in rejecting the claims on
16 appeal is:

17 Paley US 1,971,164 Aug. 21, 1934
18 Jennings US 4,079,859 Mar. 21, 1978

20 Appellants contend that there is no reason to modify the teachings of
21 Paley in view of Jennings.

ISSUE

24 The issue is whether the Appellants have shown that the Examiner
25 erred in holding that the claimed subject matter would have been obvious in
26 view of the teachings of Paley in view of Jennings.

FINDINGS OF FACT

30 Paley discloses a container for use in a centrifuge for separating butter
31 fat from other substances in butter, cheese, cream, milk or like substances

1 (Page 1, ll. 16 to 19). As such, the container is shaped so as to fit in a
2 centrifuging apparatus (Page 1, ll. 74 to 77). In particular, the collar is
3 disclosed as being wholly within the cross section of this bottle so as to fit
4 into a centrifuging apparatus (Page 1, ll. 93 to 98).

5 Jennings discloses a container for measuring liquids that includes a
6 collar that extends beyond the cross section of the container body (Figure
7 3B). The container of Jennings is not configured to be placed in a
8 centrifuging apparatus.

9 DISCUSSION

10 We will not sustain this rejection. The Paley container is configured
11 to be placed in a centrifuging machine. In our view, a person of ordinary
12 skill in the art would not modify the Paley container in view of the
13 disclosure in Jennings because such modification would alter the container
14 so that the container would not fit in a centrifuging apparatus. Therefore,
15 the modification would render the Paley container unsuitable for its intended
16 purpose. *See In re Gordon*, 733 F.2d 900, 902, 221 USPQ 1125, 1127 (Fed.
17 Cir. 1984).

18 Upon further prosecution of this application, the Examiner is urged to
19 consider whether the claimed subject matter would have been obvious over
20 variously shaped design and utility prior art references directed to perfume
21 or other containers as many of the recited features of the claimed invention
22 appear to be directed to decorative features with no specific utility or
23 purpose and thus would have been a matter of design choice well within the
24 skill of the ordinary artisan.
